HS Code (Harmonized System Code): This is a standardized numerical method of classifying traded products, developed by the World Customs Organization (WCO). It is used globally to ensure that products are classified consistently. The HS Code is a six-digit code that is used internationally.

HTS Code (Harmonized Tariff Schedule Code): This is the U.S. version of the Harmonized System. The HTS Code extends the HS Code to ten digits, providing more detailed information for U.S. import and export regulations. The first six digits of the HTS Code are the same as the HS Code, with the last four digits specific to the United States.
